

PREANESTHETIC BLOOD SCREENING

We require preanesthetic screening prior to all anesthetic procedures. This information helps us know whether we need to take additional precautions with your pet or postpone the procedure pending treatment. The latest technology has enabled us to run precise and accurate blood chemistries in the hospital hours before your pet's procedure. The laboratory results will also serve as reference values should your pet ever become ill in the future. We have designated the appropriate testing for your pet's age and health status:

CAP #1: Healthy Patients Less than Two Years of Age
6 Chemistry Blood Panel & Complete Blood Count

CAP #2: Healthy Patients Ages Two to Seven Years
12 Chemistry Blood Panel, CBC, & Electrolytes

**CAP #3: Senior Patients Greater than Seven Years or
Patients with Ongoing Illnesses**
CAP #2 plus Thyroid Screening

At your request we will screen for the following at a discounted price:

Feline Leukemia/Aids virus yes___ no___
Heartworm/Lyme/Ehrlichia/Anaplasma yes___ no___

All patients will be screened for Creatinine, PCV and TP even if the recommended choices are declined. Your pet's health and safety are our first priority.
